Education

Vellore Institute of Technology – AP Amaravati, Andhra Pradesh
B.Tech in Computer Science and Engineering (Specialization: AI & ML) *Sep 2023 – May 2027*

Skills

AI/ML: Machine Learning, Deep Learning, NLP, Transformers, Spiking Neural Networks, Model Evaluation, Feature Engineering, Data Preprocessing
LLMs & GenAI: LLM Pre-training, RAG, AI Agents & Tool Use, LLM-as-a-Judge Evaluation, Prompt Engineering, Adversarial ML & AI Security
Frameworks & Libraries: PyTorch, TensorFlow, scikit-learn, Hugging Face Transformers, NumPy, Pandas, SpikingJelly, FastAPI, Streamlit, Seaborn, Mongoose
Languages: Python, Java (Intermediate), JavaScript (Basic), SQL (Basic)
Databases: Oracle AI Database, MongoDB
Tools & Deployment: Git, GitHub, Docker, Render, Vercel

Experience

Machine Learning Intern – Fox Trading Bangalore, India
Project: Parking Availability Predictor *Mar 2024 – Apr 2024*

- Built a machine learning model to predict parking availability from historical occupancy data, working alongside senior analysts to refine the approach.
- Engineered time-based features (hour, day of week, recurring demand patterns) and compared multiple regression models to select the best performer.
- Validated the model on held-out time periods to confirm accuracy and reliability on unseen data.

Artificial Intelligence Intern – Personifwy Bangalore, India
Project: 500M-Parameter Language Model Training *Mar 2024 – Apr 2024*

- Trained a 500M-parameter transformer model end to end, covering data preparation, tokenization and the training pipeline.
- Ran GPU training with checkpointing, monitoring loss curves to tune learning rate and batch size for stable convergence.
- Evaluated checkpoints on held-out data to select the final model for the team's customer-personalization work.

Research

Detecting Model-Extraction Probing with Semantic Embeddings and MMD *Manuscript in preparation*

- Designing an inference-API wrapper that detects model-extraction and inversion-style probing in LLM traffic using maximum mean discrepancy (MMD) over semantic query embeddings, calibrated on benign traffic only.
- Formulated the threat model and a session-level risk profile with a five-level graduated response to minimize false positives on legitimate users.
- Benchmarking against PRADA, SEAT and other baselines on a 14-pair extraction benchmark.

Projects

ResearchPilot – Autonomous Research Agent *Python, FastAPI, Streamlit, Tavily, Docker*

- Built a plan-and-execute research agent with web search, page retrieval and calculator tools, reaching ∼80–85% task success on a 15-task benchmark.
- Added prompt-injection defenses, tool-level error handling and iteration limits, achieving ∼90% successful tool execution and preventing runaway loops.
- Evaluated reliability with LLM-as-a-judge scoring and iterated on prompts through failure analysis to raise end-to-end completion.

Spiking Neural Network from Scratch *Python, PyTorch, NumPy, SpikingJelly*

- Implemented Leaky Integrate-and-Fire (LIF) neurons with rate, temporal and population spike encoding in NumPy.
- Scaled to a GPU-accelerated multi-layer SNN: ∼95% accuracy on MNIST, 90–95% on N-MNIST and 60–75% on CIFAR10-DVS.
- Analyzed trade-offs between accuracy, temporal representation and compute cost across static and event-based datasets.

Legal Document Summarizer *Python, Streamlit, Hugging Face (BART/LED)*

- Built an abstractive summarization pipeline that turns long legal PDFs into structured, plain-English summaries.
- Implemented extraction, preprocessing, chunking, summarization and aggregation to handle multi-page contracts.
- Achieved ROUGE-L of ∼0.35–0.50 and BLEU of ∼0.15–0.30 on the CUAD dataset.

Certifications

- Oracle Autonomous AI Database and Machine Learning Essentials – Certificate
